**San Diego's SeQual Technologies Loans 35 Portable Oxygen
Units to Evacuees at Qualcomm Stadium**
Expert to Demonstrate Use, Offer Free Training on Site

SAN DIEGO - SeQual Technologies Inc., a San Diego-based medical equipment manufacturer which develops oxygen systems known worldwide for their reliability, quality, revolutionary design and economy, has loaned 35 of its portable Eclipse[®] Oxygen System units for use by wildfire evacuees at Qualcomm Stadium.

The Eclipse is a portable oxygen concentrator. The 17-pound unit, on wheels and about the size of a child's backpack, pulls oxygen from the air and delivers it in nearly-pure form to those with breathing or lung difficulties. It is ideal for disaster response, as it needs only AC electrical power from a wall socket, DC electrical power from a vehicle, or its own internal battery to make medical oxygen. SeQual's Eclipse units are available now for oxygen-dependent patients at the medical center at Gate A in Qualcomm Stadium.

Mark Scott, Manager from SeQual, will be on site at the stadium TODAY, Wednesday October 24, 2007 from 3:00 p.m. to 6:00 p.m. to demonstrate how to use the Eclipse and answer questions from the media or those interested in the technology, which was developed in San Diego.

Founded in 1991, SeQual is a private company based in San Diego. For more information, see www.sequal.com.
